

AMENDMENTS TO THE CLAIMS

1. (Withdrawn) A test kit for introducing a protein and/or peptide into cells which comprises a container containing a cationic group-containing polymer and a container containing a reagent for coupling or binding the cationic group-containing polymer to the protein and/or peptide.
2. (Withdrawn) A test kit for introducing a protein and/or peptide into cells which comprises a container containing a cationized conjugate to be coupled to the protein and/or peptide.
3. (Currently Amended) A method of introducing a protein and/or peptide into cells which comprises using a conjugate generated by coupling or binding of a cationic group-containing polymer to a protein and/or peptide as a carrier for the introduction target protein and/or peptide,
wherein the cationic group-containing polymer has a number average molecular weight of not more than 3000.
4. (Original) The method of intracellular peptide and/or peptide introduction according to Claim 3,
wherein said conjugate-forming protein and/or peptide comprises at least one protein and/or peptide selected from the group consisting of avidins, protein A and/or protein G, and antibodies.
